## INTRODUCTION

### Introduction

#### **DU PROFILE**

BISELCO Franchise covers the entire Calamian Group of Islands located on the northern Palawan. The Calamian Group of Islands, also called the Calamianes, consist of over 80 islands and islets located 200 nautical miles southwest of Manila. Figure below shows the franchise map of BISELCO. Energized areas are indicated by yellow color, they are connected to BISELCO's grid, while green indicates areas currently unenergized (mostly islands).

Busuanga Island is the largest island in the Calamian Group. Within the island are two neighboring municipalities namely Coron and Busuanga. Coron is the major energy sales generating area on the three islands. Busuanga Island covers two municipalities namely Coron and Busuanga.

## INTRODUCTION

The other two Islands are Culion and Linapacan Islands. Culion Island is two hours by pumpboat while Linapacan Island is five hours. Coron town is the commercial business and transportation center on the Calamianes Group where rapid commercialization is going on with the increasing volume of tourists flocking each year especially during summer.

#### **OPERATION AND PERFORMANCE**

BISELCO is composed of six districts represented by six board of directors and a General Manager with sixty two employees. There are four areas on which each has its own sub-offices namely: Busuanga, Culion, San Miguel and Nangalao.

It was classified as Medium Electric Cooperative and was categorized by NEA as AAA electric cooperative last 2017 due to its satisfactory performance indicated by the following:

System's Loss : 11%

Collection Efficiency : 100%

Reliability : SAIFI – 28.49 SAIDI – 779.65

#### CUSTOMER COUNTS AND LEVEL OF ENERGIZATION

MUNICIPALITIES BARANGAYS					SITIOS		CONNECTIONS				
			ENERGIZED/				ENERGIZED/			CED/IED	
COVERAGE/	%	POTENTIAL	COMPLETED	%	UNENERGIZED	POTENTIAL	COMPLETED	%	POTENTIAL	SERVED	%
ENERGIZED			TO DATE				TO DATE			TO DATE	
4	100	61	61	100	0	127	120	94	23,900	15,717	66

Among sixty-one barangays covered by BISELCO sixteen are still unenergized mostly island barangays. With the implementation of DOE's PV mainstreaming, three thousand seven hundred eleven households mostly on these island barangays are schedule to be energized this year 2018.

## ENERGY AND DEMAND FORECAST

## **Energy and Demand Forecast**

#### 10 YEAR HISTORICAL

Since Busuanga/Coron is the largest island grid within the franchise area of BISELCO, it is the main contributor in terms of sales revenue. During the time when NPC-SPUG is the power supplier, electricity demand and consumption is suppressed because of power curtailments due to aging plant assets and fuel supply delivery issues. When BISELCO finally succeeded on the conduct of Competitive Selection Process (CSP) which established it selected New Power Provider (NPP), the Calamian Islands Power Corporation on 2014; growth on demand and energy consumption became abrupt due to fast growing tourism activities in the island driven by stable power supply.

There was also increase in energy consumption in the island of Culion when the NPC\_SPUG started to increase its operating hours for twelve (12) to 24 hours on the year 2015.

Meanwhile, there is no significant energy consumption growth in the island of Linapacan since the number of operating hours in still twelve hours up to this date.

#### **10-YEARS HISTORICAL**

	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
Energy Purchased (Mwhr)	6,515	8,100	9,531	9,668	10,889	12,088	14,954	20,169	24,135	29,855
Energy Sales (Mwhr)	5,670	7,099	8,415	8,585	9,747	10,680	13,147	17,539	21,517	26,573
System's Loss (Mwhr)	845	1,001	1,116	1,082	1,142	1,407	1,807	2,631	2,618	3,282

#### **10-YEARS FORECAST**

	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027
Energy Purchased (Mwhr)	35,147	38,855	44,848	49,042	53,804	58,607	63,795	69,385	75,387	81,813
Energy Sales (Mwhr)	31,703	35,276	40,812	44,678	49,069	53,508	58,309	63,487	69,055	75,023

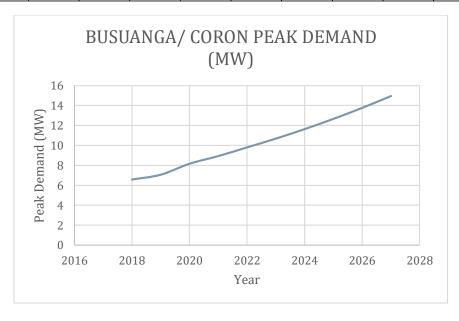

BISELCO considered an aggressive forecast on its projection on energy consumption due to increasing commercial viability of area manifested by continuous construction of hotel buildings specially in the island of Busuanga.

# **ENERGY DEMAND AND FORECAST**

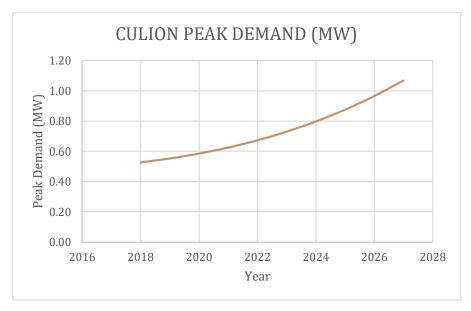

## **Energy Demand and Forecast**

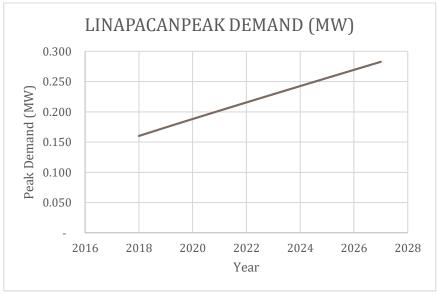

#### **PEAK DEMAND**

	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027
BUSUANGA/ CORON (MW)	6.567	7.053	8.154	8.922	9.793	10.674	11.627	12.654	13.758	14.941
CULION (MW)	0.527	0.553	0.585	0.625	0.673	0.730	0.797	0.876	0.966	1.068
LINAPACAN (MW)	0.160	0.174	0.188	0.202	0.216	0.229	0.243	0.256	0.269	0.283
TOTAL	7.254	7.780	8.928	9.749	10.682	11.633	12.667	13.785	14.993	16.292

# ENERGY DEMAND AND FORECAST

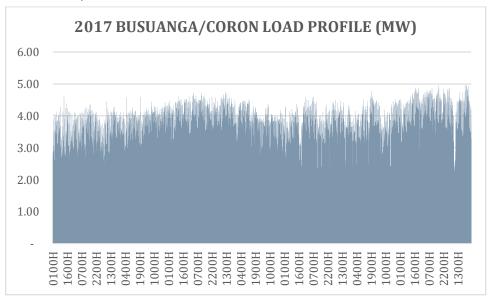

#### FORECAST METHODOLOGY AND RESULT

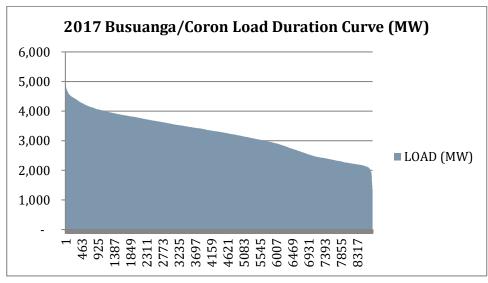

BISELCO preferred to use Regression Analysis on its forecasting methodology. There were up to 130 polynomial equations used and among these models that passed the validity and accuracy tests, the best and most realistic model was chosen. Because each Island Grid has different economic growth, forecast was done separately for each of the islands.

## LOAD PROFILE AND LOAD DURATION CURVE

## LOAD PROFILE AND LOAD DURATION CURVE

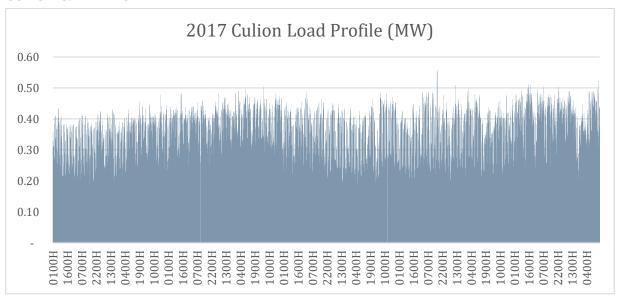

#### **BUSUANGA/CORON**

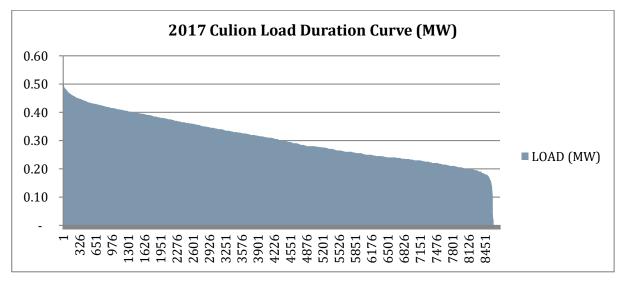

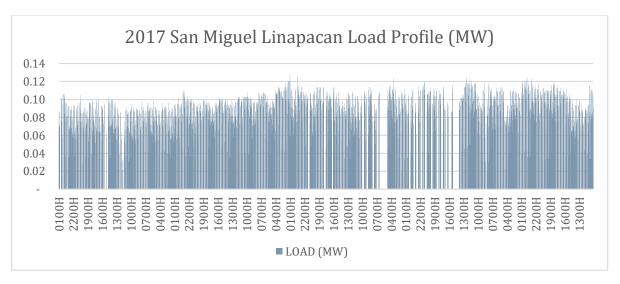

## LOAD PROFILE AND LOAD DURATION CURVE

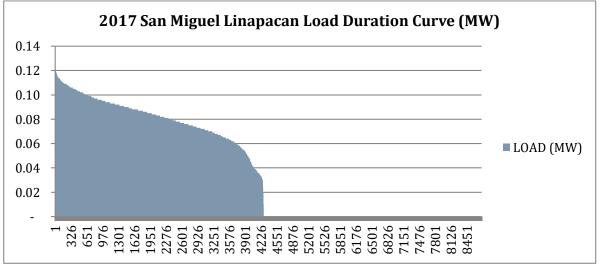

#### **CULION & LINAPACAN**

## LOAD PROFILE AND LOAD DURATION CURVE

With the pending application for 20-year term Power Supply Agreement between BISELCO and Culna Renewable Energy Corporation (CREC), BISELCO for now assumes that the baseload and peaking requirements for the island of Culion and Linapacan will be sufficient during the entire term of the PSA. However, BISELCO believes that there is a big possibility that the load growth trend will be most probably be transformer into an aggressive when a much reliable power supply is already established on these two municipalities.

## **EXISTING POWER SUPPLY CONTRACTS**

#### **EXISTING POWER SUPPLY CONTRACTS**

#### SUMMARY OF EXISITNG CONTRACT AND DETAILS

Supply Contracted	Plant Owner/ Operator	Capacity Factor	PSA Effectivity (MM/YR)	PSA	Contracte d Capacity, MW	Contracted Energy, MWH	Base / Mid- merit / Peaking	Embedded/ Grid Connected	Utility- owned/ NPC/ IPP/ NPC-IPP	Status	Fuel Type	Canacity	Net Dependabl e Capacity (MW)
Coron Power Station	CIPC	0.85	20-Aug-14	20-Aug-29	6.334		Base/ Peaking	Grid Connected	NPP	OPERATIONAL	HFO	8.12	6.334
Busuanga Power Station	CIPC	0.85	8-Dec-13	8-Dec-28	0.608		Peaking	Grid Connected	NPP	OPERATIONAL	LFO	0.7	0.608
Culion Diesel Power Plant	NPC-SPUG		25-Dec-18	25-Dec-21	693	3,189	Base/ Peaking	Grid Connected	NPC	OPERATIONAL	LFO		0.63
Linapacan Diesel Power Plant	NPC-SPUG		25-Dec-18	25-Dec-21	174	617	Base/ Peaking	Grid Connected	NPC	OPERATIONAL	LFO		

#### **BISELCO-CIPC PSA**

After several Competitive Selection Process transactions and extensive negotiations, BISELCO and CIPC entered a fifteen (15) – year PSA on August 8, 2011 as amended on December 20, 2011.

ERC Case No. 2012-05 RC or Petition for Approval of Power Supply Agreement and Amendatory Agreement and NPP True Cost Generation Rate (NPP\_TCGR) with Provisional Authority was jointly filed by BISELCO and CIPC to the Energy Regulatory Commission (ERC) on January 16, 2012. The ERC issued its approval on December 10, 2012.

#### SALIENT FEATURES OF THE CONTRACT

- The Agreements have term of Fifteen (15) years from the Commercial Operations Date (COD). CIPC constructed two power stations each for the municipalities of Busuanga and Coron. Busuanga Power Station COD is December 8, 2013; Coron Power Station (CPS) COD is August 20, 2014).
- CPS is the principal generating facility with a Net Dependable Capacity of 6.334 MW Bunker Fired engines and provides the full-service requirements of BISELCO (Baseload, Intermediate and Peaking) as well as its related ancillary requirements (Back-up and Spinning Reserves). It operates on 24/7 basis throughout the fifteen (15) year term of the PSA.
- BPS will be the secondary generating facility with a Net Dependable Capacity of 0.608 MW
  Diesel Engines and provides the peaking and voltage regulation requirements for the
  Municipality of Busuanga. It is expected to operate during peak hours of each day
  throughout the fifteen (15) -year term of PSA.

## **EXISTING POWER SUPPLY CONTRACTS**

- The Agreements do not stipulate Minimum Energy Off-take (MEOT). However, a first priority dispatch for CIPC is indicated therein, a Net Expected Energy (NEE) of 18,302,156 kWh per annum and Maximum Deliverable Energy (MDE) of 37,200,000 kWh per annum.
- In the event that the actual downtime of the power stations exceeds the allowable downtime and CIPC fails to deliver the NEE per annum, CIPC shall provide alternative power and bear the positive difference between the generation cost of the alternative power supplier/s and true cost of generation.

#### **BISELCO-NPC-SPUG PSA**

The existing PSA between BISELCO and NPC\_SPUG for Culion and Linapacan Diesel Power Plants expired last year-2017. Negotiations for 4-year PSA Renewal (2019-2022) for the island of Culion and Linapacan is currently ongoing, anticipating the entry of NPP, the Calamian Islands Renewable Energy Corp. (CREC). BISELCO-CREC 20-year term PSA is currently being applied to ERC for approval.

#### **CURRENTLY APPROVED SAGR**

Currently approved SAGR for BISELCO is 4.024 Php/kWhr effective only last April 2018. BISELCO is included on Other Luzon Group 1 Area of NPC-SPUG.

# SUPPLY VS DEMAND

## SUPPLY VS DEMAND

Supply Demand	ACTUAL					FORE	CAST				
	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027

## **DISTRIBUTION IMPACT STUDY**

#### DISTRIBUTION IMPACT STUDY

For purpose of Competitive Selection Process in Busuanga Island Grid on which this Power Supply Procurement Plan is formulated, the DIS made is only intended for Busuanga Island Grid.

Using the scenarios required by the Philippine Distribution Code (PDC) on the conducto of DIS, the condition of the island's distribution system was assessed based on thermal, voltage, and short circuit performance as it conforms with the requirements of the PDC.

The findings under thermal and voltage assessment are as follows:

- 1.) By years 2018 and 2023, the grid with the power plants will not expirienace overloading and over/undervoltages;
- 2.) By the year 2028, maximum loading of the lines during system peak will roughly be 80%. Low voltages at the extreme ends of the lines are expected,
- 3.) To address the expected low voltage problems in year 2028, capacitors will need to be installed. The generators will be able to regulate voltages during off-peak even with capacitors installed.
- 4. BISELCO will need to upgrade its lines from Coron to Busuanga to minimize the real power losses by 20 kW. This will be funded through Capital expenditure Projects (CAPEX).
- 5. Installation of Solar Plant will improve voltage regulation in the vicinity. No line improvement will be needed for the connection of the Solar Plant at its proposed location.

Short circuit studies indicated that fault levels of the buses in the system will no increase beyond the standard interrupting capacity of protection equipment.

In general, DIS suggests that a diesel-solar-battery plant could be connected to BISELCO's distribution system without violating the standard thermal, voltage and short circuit performance. Based on the forecasted demand, the said diesel-solar-battery hybrid power plant could support the power requirements of the island up to 2028.

Attached on Annex B is the complete and comprehensive copy of DIS.

## SCHEDULE OF CSP

#### SCHEDULE OF CSP

#### **BUSUANG ISLAND GRID**

Current NPP on Busuanga Island Grid has a total Net Dependable Capacity of 6.942 MW. This capacity is no longer sufficient this year 2019 if N-1 reliability criteria is concerned. Without the largest unit, there will be a 1.613 MW capacity deficit by 2019. This prompts BISELCO to conduct emergency power procurement in order to maintain adequate reserve while waiting for a long term power supply.

Additional capacity is expected as early as 2021. For Coron & Busuanga BISELCO plans to have another CSP by 2027 as indicated on the table below:

Year	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029 (end of PSA with existing NPP)
Base	4,800	4,800	4,800	4,800	4,800	4,800	4,800	4,800	4,800	4,800	4,800	4,800
Peaking	640	640	640	640	640	640	640	640	640	640	640	640
Reserve	2,400	2,400	2,400	2,400	2,400	2,400	2,400	2,400	2,400	2,400	2,400	2,400
Additional Capacity 1				9,000	9,000	9,000	9,000	9,000	9,000	9,000	9,000	9,000
Additional Capacity 2										9,000	9,000	9,000
Peak Demand	6,567	7,053	8,154	8,922	9,793	10,674	11,627	12,654	13,758	14,941	15,799	16,600
SURPLUS (w/o N-1)	1,273	787	(314)	7,918	7,047	6,166	5,213	4,186	3,082	10,899	10,041	25,840
SURPLUS (w/ N-1)	(1,127)	(1,613)	(2,714)	5,518	4,647	3,766	2,813	1,786	682	8,499	7,641	6,840

Expiration of contract on the existing NPP and N-1 reliability criteria is considered on the timing of capacity additions.
