

Power Supply Procurement Plan 2020-2029

ILOILO 1 ELECTRIC COOPERATIVE, INC ILECO 1

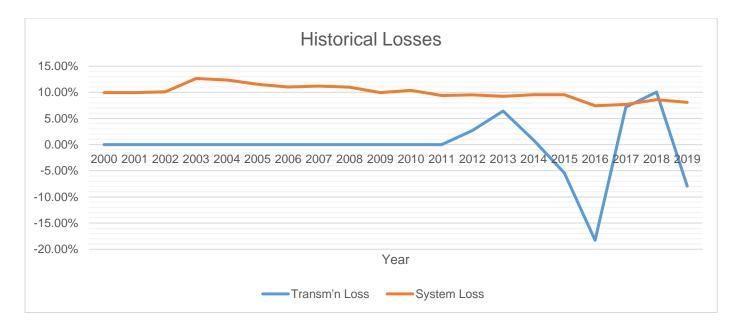

Historical Consumption Data

| Year | Coincident Peak MW | MWh Offtake | WESM | MWh Input | MWh Output | MWh System Loss | Load Factor | Transm'n Loss | System Loss |
|------|--------------------|-------------|---------|-----------|------------|--------------------|-------------|---------------|-------------|
| 2000 | 20.26 | 86,846 | | 86,846 | 78,221 | 8,626 | 49% | | 9.93% |
| 2001 | 20.28 | 94,205 | | 94,205 | 84,846 | 9,359 | 53% | | 9.93% |
| 2002 | 23.93 | 101,448 | | 101,448 | 91,201 | 10,248 | 48% | | 10.10% |
| 2003 | 27.03 | 113,512 | | 113,512 | 99,156 | 14,356 | 48% | | 12.65% |
| 2004 | 28.09 | 122,057 | | 122,057 | 106,963 | 15,094 | 50% | | 12.37% |
| 2005 | 29.16 | 128,320 | | 128,320 | 113,507 | 14,813 | 50% | | 11.54% |
| 2006 | 30.12 | 131,589 | | 131,589 | 117,078 | 14,510 | 50% | | 11.03% |
| 2007 | 30.34 | 143,001 | | 143,001 | 127,007 | 15,994 | 54% | | 11.18% |
| 2008 | 30.62 | 144,120 | | 144,120 | 128,290 | 15,830 | 54% | | 10.98% |
| 2009 | 30.90 | 158,839 | | 158,839 | 143,038 | 15,802 | 59% | | 9.95% |
| 2010 | 33.51 | 171,300 | | 171,300 | 153,517 | 17,783 | 58% | | 10.38% |
| 2011 | 35.44 | 173,345 | | 173,345 | 157,060 | 16,285 | 56% | | 9.39% |
| 2012 | 38.31 | 195,664 | -5,293 | 190,371 | 172,259 | 18,113 | 57% | 2.70% | 9.51% |
| 2013 | 42.15 | 216,084 | -13,888 | 202,196 | 183,513 | 18,683 | 55% | 6.43% | 9.24% |
| 2014 | 44.29 | 211,271 | -1,718 | 209,553 | 189,561 | 19,993 | 54% | 0.81% | 9.54% |
| 2015 | 46.13 | 216,396 | 11,697 | 228,094 | 206,319 | 21,775 | 56% | -5.41% | 9.55% |
| 2016 | 49.25 | 221,952 | 40,588 | 262,540 | 239,508 | 19,510 | 61% | -18.29% | 7.43% |
| 2017 | 51.09 | 295,388 | -21,136 | 274,253 | 253,224 | 21,029 | 61% | 7.16% | 7.67% |
| 2018 | 57.36 | 337,693 | -33,932 | 303,761 | 277,610 | 26,151 | 60% | 10.05% | 8.61% |
| 2019 | 66.77 | 321,382 | 25,441 | 346,823 | 335,478 | 28,055 | 59% | -7.92% | 8.09% |

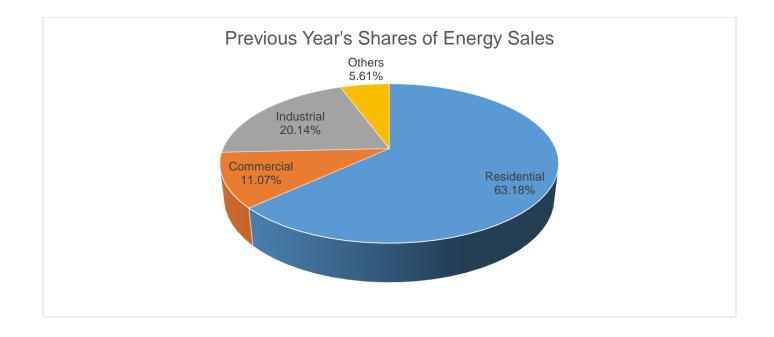

Non-Coincident Peak Demand increased from 57.36 MW in 2018 to 66.77 MW in 2019 at a growth rate of 16.47% due to the significant loads that were energized during the previous year's particularly commercial and industrial loads such as Hatchery, Malls, Subdivisions, and other Factories. MWh Offtake decreased from 337,693 MWh in 2018 to 321,382 MWh in 2019 at a rate of 4.83% due to WESM exposure. Within the same period, Load Factor ranged from 59% to 60%. There was an abrupt change in consumption on 2019 due to increase in commercial and industrial loads.

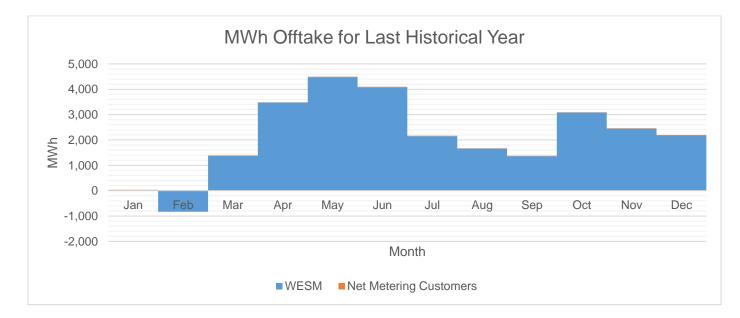

MWh Output increased from year 2018 to year 2019 at a rate of 20.85%, while MWh System Loss increased at a rate of 7.28% within the same period. ILECO 1 system loss were maintain into a single digit for the past 5 years due to the continuous implementation of CAPEX projects particularly on the system loss reduction program.

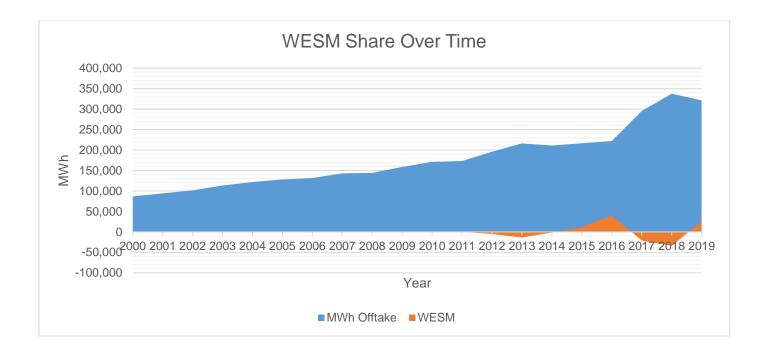

Historically, Transmission Loss ranged from 1% to 18% while System Loss ranged from 8% to 13%. Overall System Loss peaked at 12.65% on year 2013 because of the overextended distribution lines.

Residential customers account for the bulk of energy sales at 63.61% due to the high number of connections. In contrast, categorized as Others customers which is the Public Buildings and Street Lights accounted for only 5.61% of energy sales due to the low growth and number of connections. These figures are expected to essentially remain the same in the following years.

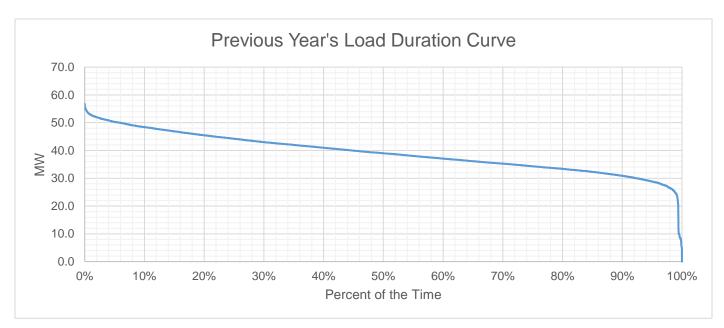

For 2019, the total Offtake for the last historical year is higher than the quantity stipulated in the PSA. The PSA with GCGI accounts for the bulk of MWh Offtake.

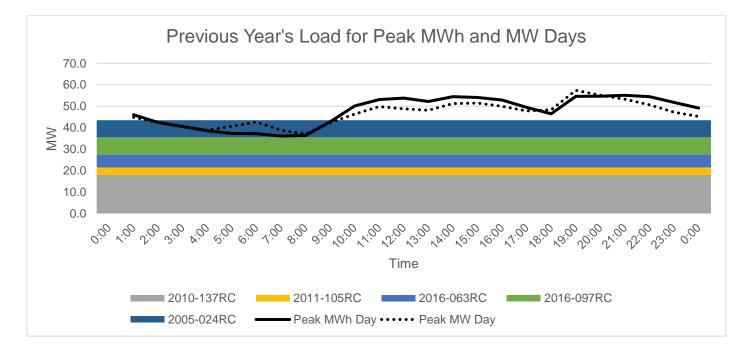

WESM Offtake increased from (33,392) MWh in 2018 to 25,441 MWh in 2019 at a rate of 174.98% due to increase in demand by almost 16.41%. The share of WESM in the total Offtake is almost 7% for the year 2019. The increase in exposure was due to ILECO 1 insufficient power supply contract.

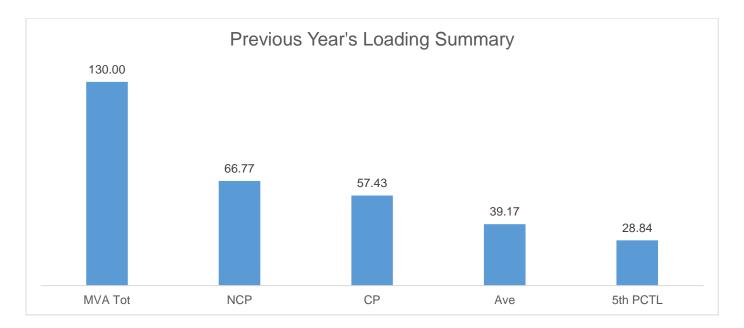

Previous Year's Load Profile

Based on the Load Duration Curve, the minimum load is 5.727 MW and the maximum coincident peak load is 57.428 MW for the last historical year. ILECO 1 peak demand is significantly increasing due to the spot loads that were identified for the next 5 years.

Peak MW occurred on 7PM due to 97% are residential consumers. Peak daily MWh also occurred on the same time. As shown in the Load Curves, the available supply is lower than the Peak Demand. The total contracted demand as of the year 2019 was 43.5MW. ILECO 1 contracted capacity is not sufficient and sources from the WESM.

The Non-coincident Peak Demand based on the graph is 66.77 which occurs on the month of May, which is around 64%/51% of the total rated/maximum substation capacity of 104/130 MVA at a power factor of 94.75%. The load factor or the ratio between the Average Load of 39.17 MW and the Non-coincident Peak Demand is 58.67% of. A safe estimate of the true minimum load is the fifth percentile load of 28.84 MW which is 43.19% of the Non-coincident Peak Demand. The 5th Percentile Load or the minimum demand usually occurs during the off-peak.

| Metering Point | Substation MVA | Substation Peak MW | | |
|----------------|----------------|--------------------|--|--|
| Sta Barbara | 30 | 12.790 | | |
| San Miguel | 20 | 16.971 | | |
| Tigbauan | 10 | 11.058 | | |
| Miagao | 10 | 5.811 | | |
| Oton | 15 | 10.547 | | |
| Pavia | 30 | 10.873 | | |
| Cabatuan | 15 | 6.274 | | |

The substations loaded at above 70% are Tigbauan, San Miguel and Oton based only on the rated capacity of the transformer. Tigbauan Substation is in critical loading condition. As part of CAPEX 2018-2020 filed in ERC, the following substations have a plan of upgrading and construction of additional substation to address the capacity issue and increasing demand cause from the identified spot loads.

Forecasted Consumption Data

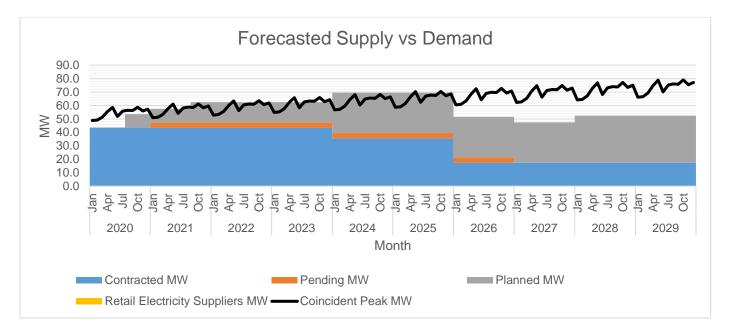

| Year | Month | Coincident Peak MW | Contracted MW | Pending MW | Planned MW | Retail Electricity Suppliers MW | Existing Contracting Level | Target Contracting Level | MW Surplus / Deficit |
|------|-------|-----------------------|---------------|------------|------------|---------------------------------------|----------------------------------|--------------------------------|-------------------------|
| 2020 | Jan | 49 | 43.50 | | | | 89% | 89% | -5.33 |
| | Feb | 49 | 43.50 | | | | 88% | 88% | -5.67 |
| | Mar | 51 | 43.50 | | | | 85% | 85% | -7.76 |
| | Apr | 55 | 43.50 | | | | 79% | 79% | -11.90 |
| | May | 59 | 43.50 | | | | 74% | 74% | -15.07 |
| | Jun | 52 | 43.50 | | | | 84% | 84% | -8.41 |
| | Jul | 56 | 43.50 | | | | 78% | 78% | -12.29 |
| | Aug | 56 | 43.50 | | 10.000 | | 77% | 95% | -2.90 |

The Peak Demand was forecasted using the historical system peak and was assumed to occur on the month of May due to the weather is generally hot. Monthly Peak Demand is at its lowest on the month of January due to the coolest weather. The number of forecasted requirements from year 2020-2029 was based on the 7-year historical data. In forecasting, ILECO 1 used regression analysis and follows the criteria for the accuracy and validity test. In general, Peak Demand is expected to grow at an average rate of 3.3% annually.

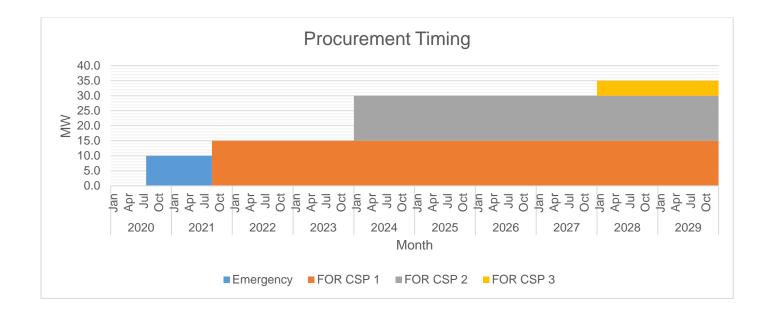

The available contracted supply is generally below the Peak Demand. This is because of the rapid increase on the demand of ILECO 1.

Of the available supply, the largest is 18MW from GCGI. This is followed by 11.5MW from PEDC.

The existing contracted capacity of ILECO 1 is only 43.5 MW versus the peak demand of 66.77MW in the year 2019. Based on the forecasted demand it will reach up to 79MW in year 2029. Along the years there are PSA that will be expiring particularly the 18MW GCGI and 8MW PPC on year 2025 and 2023 respectively. There were also affected PSA that was filed on or after June 30 of 2015. And these are 8MW from PEDC unit 3, 6MW from PCPC unit 1 and 11MW PCPC unit 2. On September 20, 2019 the ERC already issue an order affecting these 3 supplies concerning to DOE circular on the conduct of CSP. 8MW from PEDC unit 3 and 6MW from PCPC unit 1 are already supplying ILECO 1 due to the provisional authority. As of this year ILECO 1 has an on-going application of 4MW from SPC Island Power Corporation. ILECO 1 must conduct an emergency and planned procurement of power supply starting in year 2020 onwards to minimize the exposure in the market and secure the supply during contingencies and supply deficiencies.

The contracted capacity of ILECO 1 has a significant difference versus its actual demand. ILECO 1 needs to fast track the filing of application as well as the ERC and other concerned agencies. Last year ILECO 1 submitted requirements to NEA and DOE for the emergency procurement and waiting for the feedback.

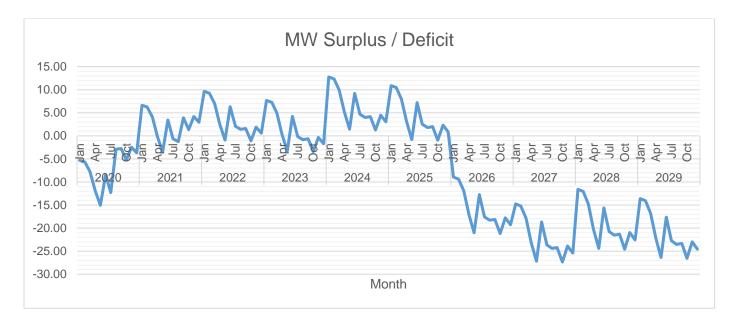

The first wave of supply procurement will be 15MW planned to be available by the month of September 2021. This will be followed by 15MW planned to be available by the month of January 2024 and 5MW on January 2028.

Since ILECO 1 demand deficit significantly increases due to the spot loads and expiring contract, ILECO 1 will procure emergency supply within the year.

Currently, there is under-contacting by almost 35% based on the peak demand. The highest target contracting level is 122% which is expected to occur on January 2024. The lowest target contracting level is 63% which is expected to occur on October 2027. ILECO 1 is also affected by

the SC decision that pertains to the conduct of CSP for the procurement of power supply. The affected demand was 25MW in total.

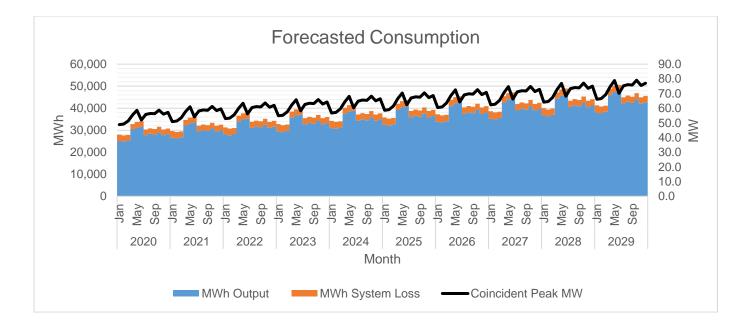

Currently, there is under-contacting by 23MW. The highest deficit is 27.36MW which is expected to occur on the month of October 2027. The highest surplus is 12MW which is expected to occur on the month of January 2024.

| | Dec | 51,135 | 42,771 | 2,814 | 10.85% | 6.17% |

MWh Offtake was forecasted using the 7-year historical data in regression analysis. The assumed average load factor is 91%. System Loss was calculated through a Load Flow Study conducted on the year 2018 using SynerGEE software. Based on the same study, the Distribution System can adequately convey electricity to customers.

MWh Output was expected to grow at an average rate of 4.73 annually.

Transmission Loss is expected to range from 2.18% to 12.11% while System Loss is expected to range from 5.65% to 10.56%. The system loss will also be decreasing and will maintain into a single digit due to the continuous system loss reduction program and CAPEX projects.

Power Supply

| Case No. | Туре | GenCo | Minimum MW | Minimum MWh/yr | PSA Start | PSA End |
|------------|--------------|--------------------------------------|------------|-------------------|------------|------------|
| 2010-137RC | Base | Green Core Geothermal, Inc. | 18.00 | 157,680 | 3/26/2015 | 12/25/2025 |
| 2011-105RC | Base | Panay Energy Development Corporation | 3.50 | 22,995 | 4/26/2011 | 4/25/2036 |

ILECO 1 procures power supply from Green Core Geothermal, Inc., Panay Power Corporation and Panay Energy Development Corporation Unit 1 through proposal and negotiations and Swiss challenge from Palm Concepcion Power Corporation and Panay Energy Development Corporation Unit 3. The entire 4 suppliers are a base load plant while Panay Power Corporation is Intermediate load. The performance of the existing suppliers complies with the obligations based on the power supply contract. ILECO 1 has also a plan to transfer the existing 8MW diesel supply to coal plant to minimize the generation blended rate.

| Case No. | Туре | GenCo | Minimum MW | Minimum MWh/yr | PSA Start | PSA End |
|----------|---------|------------------------------|------------|-------------------|-----------|----------|
| | Peaking | SPC Island Power Corporation | 4.00 | 5,840 | 1/1/2021 | 1/1/2026 |

The PSA with SIPC filed with was procured through aggregated bidding of electric coop in Panay which participated by ILECO 1, ILECO 2 and ANTECO. It was selected to provide for peaking requirements due to a diesel fuel plant. SPC Island Power Corporation is diesel plant and located at Dingle, Iloilo.

| PSA Signing | 12/20/2020 | 5/22/2022 | 5/22/2027 | 11/19/2021 |
| Joint Filing | 12/29/2020 | 5/31/2022 | 5/31/2027 | 11/28/2021 |

Since ILECO 1 has a significant deficit in terms of the supply requirement, it needs to fast track the procurement timeline to minimize the impact of WESM exposure. Table above shows the schedule of procurement.

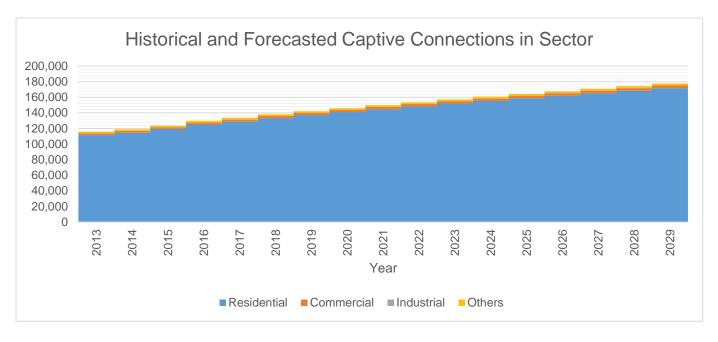

For the procurement of 10MW of supply which is emergency to be available on August 2020. For the procurement of 15MW of supply which is planned to be available on September 2021, the first publication or launch of CSP will be on August 2020. Joint filing is planned on December 2020, or 150 days later, in accordance with DOE's 2018 CSP Policy.
