

Republic of the Philippines
DEPARTMENT OF ENERGY

July 15, 2021

The Oil Industry Management Bureau through the Oil Industry Standards and Monitoring Division in cooperation with the Technical Committee on Petroleum Processes and Facilities (TCPPF) in coordination with other government agencies, industry players and safety practitioners has just completed the Draft Philippine National Standards (DPNS) on Vehicle Transport for Bulk Liquid Fuel (LF). This draft PNS has been prepared by the Technical Working Group (TWG) in response to the policy direction of the Department of Energy to offer guidance and prepare a document reflective of the local regulations and safety requirements associated with the transportation of Bulk Petroleum Fuels via Tanker Trucks.

This Standard provides for the minimum requirements of tank truck vehicle design and specifications to ensure worker-safe, environment-friendly and quality assured transport of bulk liquid fuels. Additionally, in case of safety incidents, emergency response procedures and guidelines are also outlined herewith. Furthermore, this Standard also provides for all existing government regulations and requirements in the operation and maintenance of tank truck vehicles used for petroleum products.

In line with this, enclosed is a copy of the DPNS on Vehicle Transport of Bulk Liquid Fuels which is being circulated to all concerned sectors from July 21 to September 21, 2021, for comments. We appreciate receiving your comments on or before September 21, 2021. Non receipt of your comments on the specified date shall be construed your concurrence to the draft DPNS on Vehicle Transport of Bulk Liquid Fuels.

Thank you for your usual cooperation.

Very truly yours,

Director **RINO E. ABAD**
Chairman -TCPPF
