LPG BUYING TIPS

Check the weight of the LPG tank before buying

How to determine the net content of LPG?

1. Look for the Tare Weight (TW) (weight of the empty tank) of the LPG you're buying.
2. Weigh the filled LPG tank.
3. Deduct the tare weight of the from the weight of the filled LPG tank.

Example: 23.3 kg. Weight of LPG tank
- 12.3 kg. Tare Weight (TW)

11.0 kg. Net content of LPG

*Remember:
The standard weight of LPG for
household use is 11.0 kg.*

SAFETY TIPS ON HANDLING LPG

1. Do not invert LPG cylinders or let it lie horizontally on the floor.
2. Use only LPG resistant rubber hoses with clamps and regularly check for wear, cracks and leaks using soapy and water.
3. Keep LPG cylinders away from electrical points and other sources of fire/ ignition.
4. Do not store LPG cylinders in enclosed kitchen cabinets.

In case of Leakage:

5. Open all doors and windows to improve ventilation.
6. Do not switch on/off electrical switches or connect/disconnect electrical plugs.
7. In case there is already a fire in the hose, put-off the fire in the hose using wet cloth and close the valve. Do not pull off the regulator from the tank.
8. If the fire is in the valve or the regulator cannot be closed, use fire extinguisher or wet cloth to put-off the fire.
9. If there is no available fire extinguisher or wet cloth, take the LPG cylinder in and open area and contact the distributor or emergency service.
